SUMMARY

Aspiring Cyber Security & Software Engineer. Experienced in building AI-driven predictive models and designing secure virtualized lab environments for vulnerability assessment. Combines technical proficiency in Python and C++ with a strategic mindset developed through digital marketing

EDUCATION

BS Software Engineering **2024- Continued**
• Federal Urdu University of Arts, Science & Technology

TECHNICAL SKILLS

- **Security & Networks:** VirtualBox, Network Isolation, Vulnerability Labs, Penetration Testing Basics.
- **Programming:** Python, C++, HTML5, CSS3, JavaScript.
- **Tools & Platforms:** Linux (Kali), Git/GitHub, Meta Ads, MS Office, CapCut, Photoshop.
- **AI/ML:** Linear Regression, Classification Models, Data Pre-processing. (Basics)

PROJECTS

VulnLab - Cybersecurity Lab Environment

Github: [Vulnlab](#)

- Designed and deployed a controlled virtualized environment using VirtualBox for safe security testing.
- Integrated vulnerable machines to practice penetration testing techniques and vulnerability scanning.

AI Placement & Salary Predictor

Github: [Placement Predictor App](#)

- Developed an end-to-end ML application using Python to predict student placement eligibility and salary brackets.
- Implemented Linear Regression and Classification models, achieving high accuracy by training on historical datasets.
- Managed data cleaning and feature engineering to optimize model performance.

Personal Portfolio Website

Github: [HaroonKhalid](#)

- Created a responsive personal brand hub using HTML, CSS, and JavaScript.
- Focused on clean UI/UX and interactive elements to showcase professional growth and technical projects.

WORK EXPERIENCE

- Marketing (Mega Construction & Material suppliers)
- Meta Ads
- Social Media Marketing
- Call Center
- Worked as internee in Sigma Evolution

ADDITIONAL INFORMATION

- **Languages:** Urdu , English , Punjabi
- **Design Tools:** Adobe Premiere Pro, Canva, Lightroom, CapCut
